

Don't Let Your Network Slow Down Your Business!

Let HughesON™ Managed Network Services enhance your network's performance so you can create a better user and customer experience and deliver on your business promises.

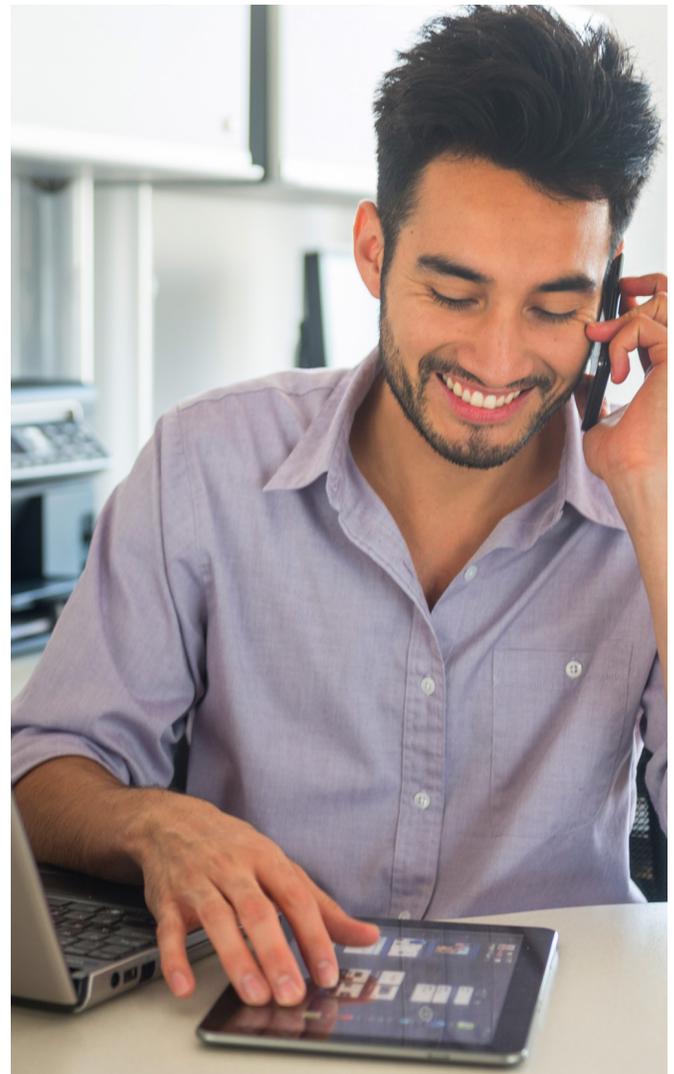

No matter how you approach your network and digital infrastructure, there are many day-to-day challenges. Perhaps you face the need to:

- Expand bandwidth as you add users and applications to the network.
- Rein in connectivity costs associated with MPLS.
- Make your network more flexible to meet today's fast-paced environment and rate of change.
- Improve your customer experience by eliminating the network challenges that are leading to poor application performance.

Tackling these issues while staying on top of the latest software updates and security practices is no small matter.

HughesON is a suite of end-to-end Managed Network Services designed to solve these very real business challenges in an agile, scalable, and secure manner. Our solutions:

- Optimize application performance.
- Improve the employee experience.
- Elevate customer engagement.
- And, position your enterprise for whatever the future may hold.

HughesON™

HughesON is a suite of innovative, Cloud-ready network and digital media solutions designed for the unique needs of distributed enterprises globally.

WAN

LAN

Managed Broadband Connectivity

Gain reliable and best-fit connectivity for each network location, including hard to reach remote locations. With over 450 network access partners globally, Hughes successfully integrates the right mix of transport technologies and partners to meet a customer's needs. Hughes provides wireline and wireless services, including temporary connectivity when buildout and refresh construction is required, or to support seasonal kiosks and pop-ups. Connectivity options include all wireline options, 4G and 5G LTE, point-to-point microwave, and satellite.

Managed Router Services

Get end-to-end high availability and secure site access across your entire wide area network, by simplifying the management of all routing equipment. (Complements our Managed Broadband Connectivity service.) The Managed Router offering includes router installation, configuration, maintenance, and management, plus end-to-end secure VPN tunneling from all sites. We partner with industry leaders Fortinet, Cisco and Meraki for platforms to support our services, as well as develop our own.

Managed SD-WAN

Create a secure, enterprise-grade, high performance WAN by transforming your ordinary broadband connections. Also improves network agility and manageability across the WAN by delivering application assurance, supporting high-quality VoIP, and empowering a Cloud-forward architecture. Managed SD-WAN is ideal for organizations with branches that have vastly different broadband access types and infrastructures but need to deliver a consistent and high-quality customer experience. Hughes has one of the broadest SD-WAN portfolios available in the market, with 4 leading offerings to meet the any customer's needs.

Managed Security Services

Feel confident in conducting business safely and securely with Hughes Managed Security Services. Domain experts within our Security Operations Center combine event data, analytics, and discovery tools to manage risk, maintain security visibility, and protect your data, your customers, and your reputation. Within these services Hughes offers a Payment Card Industry (PCI) Compliance Suite, a Managed Security Suite, an Internal Vulnerability Management Service, Managed Security Information and Event Management (SIEM) Incident and Response, and Endpoint Detection and Response. Tiered solutions let you secure your enterprise in critical ways, whether you need to achieve a PCI-compliant network, safeguard your customers' data, or secure remote access to your applications.

Managed Switching Services

Simplify and gain greater control over your distributed network's many switches, ensuring they are consistently configured for optimum reliability, performance, and enhanced security through Network Access Control. Our Managed Switch portfolio includes industry leaders Cisco, Fortinet, and Aruba.

Managed Wi-Fi Services

Connect employees and guests to critical applications seamlessly and securely via fast and reliable Wi-Fi access. Managed Wi-Fi can help grow your business, support innovation, improve productivity, and engage customers in new and more engaging ways. Choose a single, highly secured managed solution for both (with remote monitoring and central management), or individual networks to separate Guest Wi-Fi traffic from enterprise applications. Options also include indoor and outdoor coverage, rogue wireless scanning and Location Analytics to gain customer insights.

Managed VoIP Services

Enjoy affordable, high-quality voice communications—with far more flexible features than traditional phone lines. With the addition of SD-WAN to the existing data network, voice performance is equal to traditional phone lines, providing enterprise-grade phone service to even the heaviest voice users.

Managed Digital Media Services

Better engage employees, customers, and visitors through a range of immersive digital experiences. Hughes Managed Digital Media Services are an advanced, fully turnkey, digital signage solution that can be premises-based or Cloud-based and can be delivered via traditional TV or an app installed on a SmartTV. Services include Breakroom TV, MediaTraining, and Corporate DVR solutions that deliver real-time communication, relevant job aids and on-demand video programming.

Benefits of HughesON Managed Network Services:

- Reduces your risk across the entire network.
- Accelerates benefits through faster and standardized deployments.
- Meets your changing needs through scalable solutions that grow with your business.
- Provides greater protection through an integrated approach to security.
- Creates a solid foundation for your digital initiatives.
- Improves employee and customer experience.
- Improves operational efficiency.
- Gives you more time to focus on your business!

Hughes is proud to have **over 100 customers** who have been with us **for 10 years or more.**

“We have made a strategic commitment to utilize cloud applications. To do that, the network has to be rock solid. We continue to work with Hughes to deliver our cloud applications reliably, securely, and with great performance.”

Bob Graham, CIO
BevMo!

“The HughesON solution gives us the throughput and security we need to support our customers’ growing digital demands. It also makes us better prepared for the future as we expand our applications to support our guests.”

Drew Martin, CIO
Jack-in-the-Box

“As a longtime Hughes customer and user of the HR platform, we are very familiar with its benefits and how Hughes managed services improve our operational efficiency. In our experience the security and scalability of the Hughes HR platform are unrivaled.”

Maria Fidelibus
Vice President of Technology,
QuickChek
